Аннотация:

The urgency of the research is due to the fact that the motivational sphere, values and meanings of professional activity are the condition determining the professionalism of the future specialist, giving direction to its content, orientation, and growth potential. The purpose of the paper is the development of a scientific and methodical resource for developing the motivation of university students as an adaptive mechanism for mastering the characteristics of professional activity. The basis of the scientific and methodical resource is the author's personality-oriented training for the development of the students' educational and professional motivation, the center of which is a unique integral personality, striving for maximum realization of its capabilities. A model of personality-oriented training was developed, reflecting methodological and didactic principles; units of personal-professional qualities of students; indicators of the effectiveness of their educational and professional motivation development. Presented in the paper, the scientific and methodical resource for the development of the student's learning and vocational motivation creates comfortable conditions for the formation of professional culture's foundations in the process of learning and educational activities in the chosen direction and successful integration into the social and professional structure of society. © 2018.
