**Аннотация:**

The article analyzed the problems of stable and balanced social and economic development in the depressed republics of the North Caucasus, the basic approaches to the concepts of growth and development, the sustainable growth, the sustainable development and the balanced development were considered. It was justified that in order to obtain an integrated assessment of social-ecological and economic development factor and condition effectiveness of the region in order to ensure the end results, it is advisable to apply the multifactorial monitoring of regional economic system state management within increasing competition conditions. They proposed the polyfactorial monitoring modification of the state administration by the territories, which, unlike the known ones, also allows to consider the ecological component.
