Аннотация:

The effective authorized methodology for the retraining organization of psychologists is presented, in view of both the difference in their training programs and the procedure for their subsequent appointment to vacant positions. This methodology is based on the task of selecting the optimal plan for the retraining program of psychologists and their subsequent appointing to vacant positions. The algorithm for obtaining the optimal solution (plan) of the specified problem is proposed, as well as the meaningful example illustrating the theoretical provisions presented in the article. © 2018.
