**Аннотация:**

The article formulates conceptual provisions that reveal the strategy of integration of production (IP) in the Russian economy. The logic of IP formation is justified as a socio-economic phenomenon contributing to the creation of an innovative, or "new economy". The foreign experience of the IP strategy and the patterns of the integrated structures formation that are to be taken into account in Russia's practice are disclosed. Functional strategies for the development of IP in the Russian economy are analyzed.
