Volume 39, Issue 31, 2018, 8p

**Аннотация:**

On the one hand globalization helped in further democratization, deepened interdependence of countries and peoples, and expanded the technical and information capabilities of humankind. On the other hand, one cannot but notice that in many regions of the world threats, challenges and risks directly related to globalization outweigh all of its advantages. The unstable state of the world economy in the post-crisis period once again attracts the attention of representatives of various scientific schools to the problem of managing global economic processes

**Ключевые слова:**

Global economy, Globalization, Resource management
