Аннотация:

Object. Housing provision of the population of Russia. Subject. Social groups of the population, differing in the level and quality of housing provision. Goal. The article is devoted to the identification of the social structure of the population in Russia housing security. The main provisions of the article. The authors found the intervals of the levels of housing provision not contradicting the normative approach and the current conditions for the development of the Russian economy, in which the population should be identified as social groups with different living standards. The estimation of the relative weight of various social groups of the population, their share in the total volume of the country's housing stock has been carried out. The main provisions and conclusions of the article can be used as a basis for identifying social groups by living standards and determining their number. © IAEME Publication.
