Аннотация:

The article analyzes the basic concepts, as well as foreign best practices in the implementation of information services in urban economy management. It is noted that the future of the contemporary country is interlinked with successful digitization of public services and management functions. The use of information services extends to transport, trade, tourism, the census, public procurement, and public health service. The authors search for new mechanisms of urban management based on the establishment of sustainable communication between the population and local authorities. Following the conducted analysis, the authors propose to use geographic information systems in urban management. ©IAEME Publication
