Аннотация:

The article analyzes the main components of the population's living standards in the Republic of Kazakhstan in terms of such indicators as the income level of the population and their purchasing ability, the average monthly wage, the average size of the accrued pensions, and the subsistence minimum. The analysis included separate regions of the country and Kazakhstan as a whole. Indicators that reduce the quality of life of Kazakhstanis are revealed.

Based on the conducted studies, it was concluded that the quality of life of the population is an integral characteristic that gives an idea of the life activity of a person and society, therefore the improvement of the quality of life is the main task and criteria of the activity of the authorities.

Ключевые слова:

standard of living; quality of life; quality of life components
