Аннотация:

The article is concerned with the elaboration of approaches to the development of small businesses at the regional level. It has been found that the development of small businesses at the regional level requires measures to accumulate internal and external investment resources, to improve the structure of investment sources and optimize areas for investment. It has been determined that further training of people who work at small enterprises and training of a region's unemployed to learn the basics of entrepreneurial activities should include measures to organize the preparation and retraining of employees of local authorities and people who work in small enterprises in the conditions of the market economy, to develop training methodical materials and training aids on small business basics. While providing small businesses with the relevant information, it is essential to provide access to business information, to create a computer network for resource and goods bases and investment offers, to solve the problem of discussing draft regulatory acts in public and bring them to the attention of small businesses on time. © IAEME Publication.
