Аннотация:

For many years, the national agribusiness was not in good shape. Over the last years, the conditions of its functioning have changed drastically, which caused the tendency towards the growth of the entire agribusiness. The agricultural sector has become advanced in the import substitution policy. The paper contains the analysis of the agricultural output dynamics as part of the import substitution policy. The authors emphasize that the success of the implemented policy is connected with the consequential integration of the food security criteria into the strategy of social-economic growth of the country and its agribusiness. © 2018, Universidad del Zulia.
